

## Caring for your wood pen

Your pen is made from real wood and it needs the same care as any fine wood product. Follow these instructions to ensure years of beauty and enjoyment.

1. Keep your pen from extremes of heat and humidity, do not leave it in the car glove box, wood can split under extreme conditions.
2. **Do not** leave the pen in direct sunlight since this can fade the colour of many woods.
3. **Do not** immerse in water. Your pen is sealed and finished with several hard and durable coating layers and then a protective coating of museum grade wax. Use a soft cloth to buff up the wax as needed.
4. **Do not** use any cleaning agents . Never use any kind of abrasive pad to clean your wood or the plating. Never use any cleaning or finishing product that contains abrasives or cleaning agents in the formula. Car waxes and many household cleaners have fine abrasives or harsh cleaning solvents in the formula and these should not be used.
5. The plating may be cleaned with a damp soft cloth. **Do not** use any abrasives on the plating as the plating will be removed by the abrasive. **Do not** use spray on furniture cleaner-waxes, some of these contain abrasives.
